Portable storage for  
flexible working

# Portable storage for flexible working

Designed to make you and your workspace more productive, **hotbox™** is a unique, flexible and secure portable personal storage system that is easy to use and extremely durable.

## What makes **hotbox™** so unique and practical?

- Integrated lid with hinge and drop down facility to make access easy.
- Completely flexible interior that can accommodate any combination of A4 and US Legal hanging files, binders, magazines, notebook PCs and more.
- Compact and smooth design so it fits in personal lockers, pedestals and lateral storage systems.
- Combination lock and tether point to keep it secure.
- Ergonomic handles to make carrying it easy and comfortable.
- Storage clip to hang it on workplace screens and dividers, lifting it off the work surface.
- Manufactured from polypropylene with aluminium internals to make it durable and lightweight.

## Working on the move... from home... or in flexible working environments?

The traditional fixed office environment is disappearing with more people working on the move, from home, or from flexible offices. Never before has portable personal storage been more important than in today's fast paced working environment.

Whether you are a professional person who needs to transport files between work and home, a field-based professional who is constantly on the move or somebody who works from home **hotbox™** will take control of your personal storage!

## Work smarter and reduce your costs!

In a traditional office it is estimated that around 30% of workstations are empty at any one time, with staff either out of the office or attending meetings.

**hotbox™** allows users to transport their work and personal items safely and easily around the workplace, from a personal locker to a workstation, meeting location or home.

**hotbox™** is designed to work with all existing storage, workstation and screen systems and makes your workforce as flexible as your workplace.
